

Samuel Esteban Urrego Valencia

Software Developer | Backend, AI & Automation

Medellín, Antioquia, Colombia | urregodev@gmail.com | 316 256 0862

Portfolio: <https://port-folio-murex-mu.vercel.app> | GitHub: <https://github.com/Samuel-Urrego>

Professional Summary

Software Developer with hands-on experience building backend services, RESTful APIs, business applications, and automation workflows. Experienced with Python, FastAPI, C#, .NET, SQL Server, Redis, n8n, and AI-driven automation. Skilled in database design, business logic, system integration, Clean Architecture, and developer-focused tooling. Currently working as a Software Analysis and Development Apprentice, participating in the software development lifecycle from requirements analysis to backend implementation and deployment.

Technical Skills

- Languages: Python, C#
- Backend & Frameworks: FastAPI, .NET, ASP.NET, Blazor
- Databases & Storage: SQL Server, Stored Procedures, Query Optimization, Dapper, Redis
- AI & Automation: n8n, AI Orchestration, AI Agents, RAG, MCP, LLM Integrations
- Architecture & Security: Clean Architecture, REST APIs, JWT, OAuth 2.0, RBAC, Entra ID
- Tools & Environments: Git, Docker, Linux, Agile Development, OpenCode

Key Projects

Araxys | Python Security Framework

- Architected and developed a modular Python framework focused on advanced API key management and secure credential handling.
- Implemented high-performance persistence mechanisms using Redis for low-latency credential verification and data access.
- Designed a developer-focused API with clean syntax, modular components, and comprehensive documentation.
- Developed an extensive automated test suite to ensure reliability, maintainability, and security across the framework.

SUITE | Enterprise Management Platform

- Contributed to the development of a modular enterprise management platform using .NET, Blazor, SQL Server, and Clean Architecture.
- Designed and implemented backend modules, database structures, RESTful integrations, and business logic for internal enterprise processes.
- Integrated Microsoft Entra ID, external services, stored procedures, Dapper, and API gateway-based service communication.
- Applied software engineering practices focused on maintainability, modularity, security, and separation of concerns.

Gaia | Integrated Management System

- Designed and built a comprehensive management platform to centralize critical business processes.
- Designed relational database structures and optimized business logic through a modular backend architecture.
- Developed backend functionality focused on maintainability, system integration, and efficient data management.

Kurunami | Software Startup Initiative

- Co-founded and served as technical lead for a software initiative focused on automation and custom digital solutions.
- Designed and deployed software solutions and automation workflows according to client requirements.
- Managed digital infrastructure and contributed to backend development, system integration, and technical decision-making.

Professional Experience

Software Analysis and Development Apprentice

SENA / Antioqueña De Porcinosa | May 2026 – Present

- Participate in the Software Development Life Cycle (SDLC), from requirements gathering and analysis to backend implementation and deployment.
- Design and implement database schemas, stored procedures, and RESTful endpoints for internal service integration.
- Develop and maintain backend modules using modern software development practices and enterprise architectures.
- Collaborate with cross-functional teams following Clean Code, version control, and Agile development practices.
- Contribute to the integration and automation of internal business processes through APIs and software tools.

Education

Associate Degree in Software Analysis and Development

SENA (National Training Service) | December 2024 – Present

English Language Program

Smart Training Society | February 2024 – April 2026
